PROFESSIONAL PROFILE

QA Engineer with a **solid programming** foundation and an analytical approach. Specialized in **ensuring the quality** of cross-platform ecosystems (Web, Mobile, APIs) and **complex backoffice systems under Agile methodologies (Scrum)**. My technical background provides **advanced proficiency in databases (SQL) and modern architectures**, allowing me to go **beyond traditional testing**: I understand the underlying infrastructure, identify root causes, and collaborate closely with development teams. Currently steering my profile towards **QA Automation**, leveraging my **coding skills** (Java, Python) to evolve into automated and scalable software testing.

PROFESSIONAL EXPERIENCE

TecnoSoftware (Assigned to Banco Patagonia) | Remote | Jul 2026 – Present

QA Engineer

- Execution of comprehensive **testing cycles** for **mobile banking applications in iOS and Android environments**, managing and deploying **IPA and APK** files through the **Perfecto** platform.
- Validation of complex operations in **Backoffice** systems to ensure the integrity of business logic and the reliability of financial transactions.
- Execution of **complex SQL queries** for database verification and checking backend impact.
- Defect **life cycle** management, **test case** design, and sprint planning using **Jira**.
- Active participation in **Agile/Scrum** ceremonies, maintaining constant and fluid communication with the bank's multidisciplinary teams via **MS Teams**.

TECHNICAL PROJECTS

Collaborative Software Platform (Ristodeli) | GitHub, Vercel, Supabase

- Active participation in the software development life cycle, collaborating in feature testing and validating cloud database integrations (Supabase) and successful deployments in production environments (Vercel).

Full Stack Social Network | NestJS, Angular, MongoDB

- Development of architecture and data flows. Implementation of security validations via JWT authentication and endpoint testing to ensure user data integrity.

Data Management System | Python, SQL

- Creation of a processing system capable of handling and normalizing large volumes of data in CSV and JSON formats, ensuring information quality through exhaustive logical validations.

EDUCATION & CERTIFICATIONS

Associate Degree in Programming | UTN Facultad Regional Avellaneda (Completed: 2026)

- Key Knowledge:** Modern web architectures, relational databases, and OOP.

Mechanical Engineering (In progress) | UTN Facultad Regional Avellaneda (2026 – Present)

- Focus:** Complex problem solving and structural analytical capacity.

First Certificate in English (FCE) - B2 Level | English Time (2018 – 2024)

High School Diploma in Social Sciences | Instituto Padre Márquez, Berazategui (2018 – 2023)

TECHNICAL SKILLS

Testing & Quality:

- Mobile Testing (iOS/Android), Functional Testing, Backoffice Validation, Test Case Design, Requirements Analysis.

Tools & Methodologies:

- Perfecto, Jira, MS Teams, Agile, Scrum, Postman, Halaxia.

Tech Stack:

- SQL, Relational & NoSQL databases, Python, Java.

Architecture & Version Control:

- Git, GitHub, Cloud Infrastructure (Supabase, Vercel).
